India Update over Covid Scenario

Date – 11ᵗʰ May 2021

INDIA

India on Tuesday recorded its lowest count of daily Covid-19 cases in fourteen days despite of having 300,000 plus new coronavirus cases. With the nation fighting the invisible enemy, the focus is now on getting the vaccines and arranging the Oxygen cylinders.

But amidst all this, there's also a rising force in India, one where every individual is stepping up to help the other - from people arranging oxygen cylinders to those in need, to social media platforms like Twitter, Instagram and Facebook filled with voices of support.

New Delhi, Maharashtra (Mumbai), Rajasthan, Kerala, Karnataka, Goa, and Tamil Nadu are among the states in India that have gone into full lockdown, with more to follow in the coming days.

Overall Data *(Updated on 11ᵗʰ May)*

Total Cases	Infected	Recovered	Deaths
2,29,92,517	37,15,221	1,90,27,304	2,49,992

India began its vaccination campaign in January, and more than 170 million people have been vaccinated against COVID-19.

Vaccination for citizens over the age of 18 has also started all over the country in a war-like attempt to control the outbreak.
